

# html2fpdf

## Basic usage

You can now easily print text while mixing different styles : **bold**, *italic*, underlined, or ***all at once***!

You can also insert hyperlinks like this [www.pypi.org](http://www.pypi.org), or include a hyperlink in an image. Just click on the one below.

## Sample List

- option 1
  - 1. option 2
- option 3

Header 1	header 2
cell 1	cell 2
cell 2	cell 3
